

ORIS CERTIFIED PRESS™

Print to Industry Standards!

Quality, consistency and reliability are essential for competing in today's printing industry. And, as the industry becomes more process oriented and standards continue to increase, color control is vital in every step of the production process. To meet these challenging demands, you need a tool that removes the guesswork and provides the facts you need.

ORIS Certified Press provides the information necessary to guarantee color consistency and reliability your customers demand. Simply put, ORIS Certified Press is the ideal press quality assurance system enabling you to print to industry standards – quickly and efficiently. In the end it means improved quality, better efficiency and increased customer loyalty.

ORIS Certified Press provides the graphic arts market – including ad agencies, print buyers, color separators and printers – with a measurement tool designed to evaluate the printing press in a comprehensive, yet easy-to-understand report. With ORIS Certified Press you can quickly analyze uniformity across the press sheet and in the press direction, tone value increase, primary and secondary colors, and the grey balance. Additionally, ORIS Certified Press provides control of spot colors. Variations in press parameters can be instantly spotted and corrected to ensure the press is running to standard, while at the same time, waste and costly mistakes are prevented.

With ORIS Certified Press, control strips are designed small enough that they can be read with common hand-held scanners. Individual control strips can also be used and spot colors can be measured in single patches or strips – being compared to the pre-loaded spot color libraries from Pantone and HKS. All measurements are secure and can be used for trend analysis, allowing you to monitor color quality and detect color drifts over the entire print run and over any period of time.

ORIS Certified Press, along with ORIS Certified Proof and ORIS Certified Monitor completes the ORIS Certified Suite, providing simple, trackable proof output measurement using “pass-fail” reports to accurately comply with SWOP, FOGRA, 3DAP, GRACoL and other standards. The ORIS Certified Suite can be used for any hardcopy or virtual proof or press sheet, regardless of the system or software that was used to create it.

The Benefits of ORIS Certified Press

- Improved operational efficiencies with easy-to-use press reports that quickly provide information on deviations during the press run
- Simple “pass-fail” approach to industry standards compliance
- Significant error reduction due to early detection of problems
- Increased reliability and faster decision making due to the ability to track performance and trends in press condition over the job or over time
- Increased customer loyalty due to reliability and consistency of the color production process
- Decreased waste and costly re-makes

Ordering Information

The ORIS Certified Press Package consists of a user license for the software, an X-Rite Eye-One Spectrophotometer or Techkon RS 800 and a Dymo Label printer.
